

## UBUNTU LINUX için EDUROAM Ayarı

1. Ubuntu ile birlikte gelen ve network arayüzlerinin yapılandırılması için kullanılan **Network Manager** programı kullanılarak, eduroam ağına nasıl bağlanacağı, aşağıda adım adım anlatılmıştır. **Network Manager** üzerinden, **Connect to Other Wireless Network** seçilir.

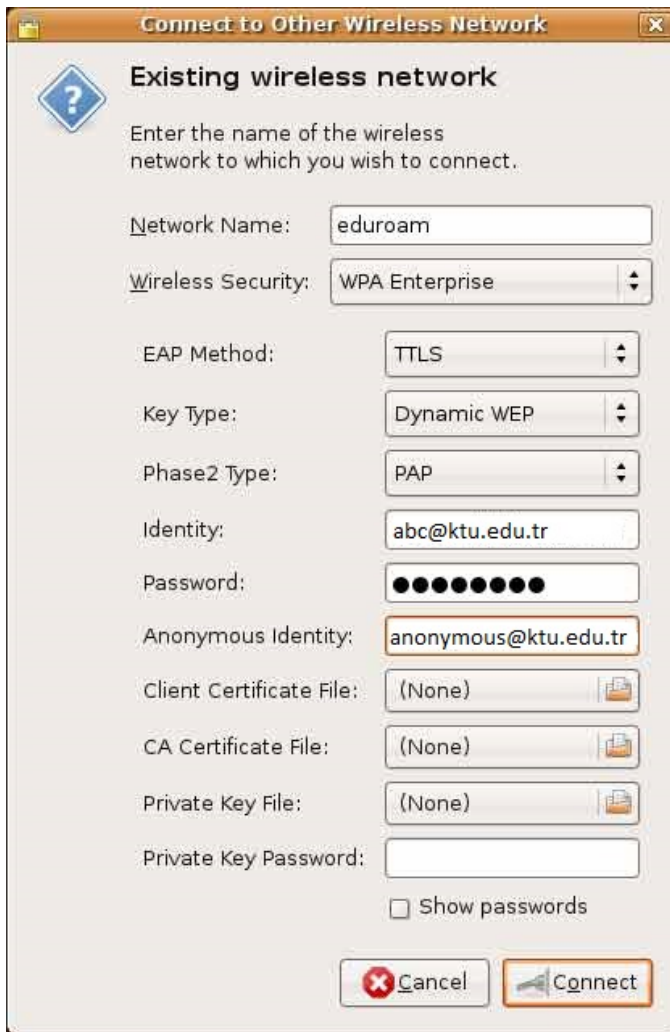

2. Açılan menüde, **Network Name** kısmına **eduroam** yazılır, **Wireless Security** kısmında WPA Enterprise seçilir.

3. Yenilene ekranında;

- **Network Name:** eduroam
- **Wireless Security:** WPA Enterprise
- **EAP Method:** TTLS
- **Key Type:** Dynamic WEP
- **Phase2 Type:** PAP
- **Identity:** kullanıcı\_adi@ktu.edu.tr
- **Password:** mail şifreniz
- **Anonymous identity:** anonymous@ktu.edu.tr
- **Client certificate file:** None
- **CA Certificate file:** None
- **Private key file:** None
- **Private key password:** (boş bırakınız)

The screenshot shows a Windows dialog box titled "Connect to Other Wireless Network". The dialog is titled "Existing wireless network" and contains the following fields and options:

- Network Name:** eduroam
- Wireless Security:** WPA Enterprise
- EAP Method:** TTLS
- Key Type:** Dynamic WEP
- Phase2 Type:** PAP
- Identity:** abc@ktu.edu.tr
- Password:** (masked with dots)
- Anonymous Identity:** anonymous@ktu.edu.tr (highlighted with a red box)
- Client Certificate File:** (None)
- CA Certificate File:** (None)
- Private Key File:** (None)
- Private Key Password:** (empty)
- Show passwords
- Buttons:** Cancel and Connect (the Connect button is highlighted with a red box)

4. **Connect** butonuna bastığınızda **eduroam** ağına bağlanacaksınız.
